

Appendix S: Diabetes, Healthy Feet and You – Brochure

People with diabetes should take care of their feet and be aware of any changes. The Canadian Association of Wound Care has developed the following tool (available in 16 languages) for people with diabetes to use.

Steps for Healthy Feet

General Health

- 1 Control your blood glucose levels.
- 2 If you smoke, quit.
- 3 Exercise daily as directed by your healthcare professional.

Caring for Your Feet

- 1 Look for signs of redness or blisters on your feet. This shows your shoe may not fit properly.
- 2 Wash your feet daily. Dry well, especially between your toes. Apply a moisturizer to your feet but not between your toes.
- 3 Do not soak your feet.
- 4 If you are unable to reach your toes or do not have feeling in your feet, have a healthcare professional trim your toenails for you.

Footwear

- 1 Shake out your shoes before you put them on.
- 2 Wear shoes at all times, indoors and out.
- 3 Buy shoes with closed toes as they protect your feet from injury.
- 4 Change your socks every day.
- 5 Buy shoes late in the day as feet tend to swell.
- 6 Have your shoes professionally fitted by a footwear specialist.

I will take care of my feet and make the changes needed to help keep my feet healthy!

DATE _____ SIGNATURE _____

This section is perforated for your personal reference.

Make the most out of your visit with your healthcare professional by asking these 3 questions:

1. What is my main problem?
2. What do I need to do?
3. Why is it important for me to do this?
