

## Regional Stroke Networks

Within Ontario, there are eleven regional stroke networks, which support stroke system integration and best practice implementation at a regional level. For each network, there is a Community and Long-Term Care Coordinator who is involved in supporting hospital and community partners in implementation of stroke best practices.

For more information about our networks, or if you would like to contact your local Community and Long-Term Care Coordinator for copies of stroke-specific resource or educational opportunities, please click on the following link(s):
